<sup>(1)</sup> Adjusted net income available to common stockholders is presented because of its acceptance by investors and by Comstock management as an indicator of the Company's profitability excluding loss on early retirement of debt, non-cash unrealized gains and losses on derivative financial instruments, gains and losses on sales of assets and other unusual items.

<sup>(2)</sup> Adjusted net income available to common stockholders per share is calculated to include the dilutive effects of unvested restricted stock pursuant to the two-class method and performance stock units and preferred stock pursuant to the treasury stock method.

<sup>(3)</sup> Includes realized gains or losses from interest rate derivative financial instruments.

<sup>(4)</sup> Adjusted EBITDAX is presented in the earnings release because management believes that adjusted EBITDAX, which represents Comstock's results from operations before interest, income taxes, and certain non-cash items, including loss on early retirement of debt, depreciation, depletion and amortization and exploration expense, is a common alternative measure of operating performance used by certain investors and financial analysts.
